

Career Opportunity Announcement

Senior Software Engineer (Full Stack)

Location: Somerville, MA or Burlington, VT

Packetized Energy is seeking a highly motivated and experienced software engineer to join the Packetized Energy team as a Senior Software Engineer.

We are looking for candidates who can help us scale our core services to meet growing demand and who can take new products from whiteboard to MVP to production efficiently and effectively. An ideal candidate would have experience working across the stack, from backend and infrastructure to web and mobile. We would also love to hear from candidates who are strong in one area and willing to work to learn another. To be successful, the candidate must thrive in a startup environment and must communicate well across engineering disciplines (our software, hardware and IoT engineers work very closely) as well as with the utilities, equipment manufacturers, and energy analysts who are our customers.

Desired qualifications:

- Passion for a clean energy future!
- Highly motivated to work in a fast-paced growth-oriented startup
- Demonstrated skill in working effectively in teams
- Ability to work independently
- Knows how to test software
- Experience with Node.js or Python
- Experience with one or more additional languages such as Java, Go, C++ or Rust
- Experience with AWS: IAM, data persistence, containers and serverless environments
- Experience developing Single Page Applications, preferably with React & Redux
- Experience with Continuous Integration/Deployment in an agile environment

Building virtual batteries from connected things

Bonus points for the following:

- An eye for design and knowledge of modern CSS
- Experience with IoT applications, especially with AWS's IoT offerings
- Experience working with massive quantities of real-time data

Equal Opportunity Employer

Packetized Energy values diversity and inclusion and we encourage applicants from groups underrepresented in the tech industry. Packetized Energy is an equal opportunity employer.

About Packetized Energy

Packetized Energy is a clean energy software and IoT company based in Burlington, Vermont. Packetized Energy aims to make energy clean, affordable, and easy to use by transforming energy appliances (e.g., water heaters, EV chargers, HVAC systems, and batteries) into valuable energy storage resources. Our primary product is the Nimble™ software platform, which helps electric utilities to solve the challenges associated with a changing electric power distribution system. The Nimble platform also includes a phone app that allows electricity customers to obtain better and more affordable service from their energy appliances, as well as IoT devices for energy management, including the Mello® smart thermostat for water heaters.

Packetized Energy has offices in Burlington, Vermont (headquarters) and Somerville, Massachusetts (near Boston). The successful candidate may choose to locate in either location.

Building virtual batteries from connected things

Burlington, VT is consistently listed as one of the best places to live in America. Vermont has an increasingly vibrant technology sector with a major research university, an IBM/Global Foundries plant, and numerous technology startups. Burlington is located on Lake Champlain and near the Green Mountains, providing numerous opportunities for outdoor activities. Burlington has a major airport and is located within a 2-hour drive of Montreal and a 3.5 hour drive from Boston.

Somerville, MA is located 5 miles west of Boston, MA. The Boston region is the technology hub for the Northeastern US and provides numerous cultural, recreational, and professional opportunities. If the candidate chooses to locate in this area, they will be based out of Greentown Labs, which is a global hub for clean energy innovation.
